**Figure S3. Comparison of cumulative incidence rate curves: Before versus after closure of the psychiatric ward.**

(A, B) Cumulative incidence rate curves for prehospital LOS in the full (A) and the PS-matched (B) cohort. (C, D) Cumulative incidence rate curves for emergency ward LOS in the full (C) and the PS-matched (D) cohort. The p-value was derived from the log-rank test. ED = emergency department, LOS = length of stay, PS = propensity scores.
